

# ULTRAPAVE<sup>20</sup>

The lightweight paving system

## Ultrapave. It's a revolution from the ground up.

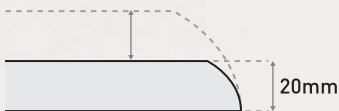

We've never been ones to stand still at RLC, which is why we're delighted to announce the launch of Ultrapave – a truly innovative product range that's revolutionising the way professionals and enthusiasts pave.

Quality natural finish

Lightweight

New thin design

The Ultrapave is 50% thinner than standard paving slabs.

Before

After

Using specially developed composite materials has enabled us to create a unique and groundbreaking range of paving products which offer massive practical and commercial advantages over conventional alternatives. The implications of this breakthrough are as simple as they are positive – for anyone whose business or DIY project involves paving, Ultrapave is the one new product you can't afford to ignore.

- **Light yet strong.** Ultrapave's 20mm thickness means a significantly lighter and more compact paving slab which is safer to handle, easier to move and quicker to position. Incredible strength-to-weight ratio and durability are achieved by using a tried & tested composite material.
- **Consistent.** Unlike many conventional paving products, laser precision manufacturing means Ultrapave's sizes and thicknesses are accurate, consistent and contribute to their overall ease of positioning.
- **Easy.** The substitution of hard aggregates means Ultrapave is quick and easy to cut, which in turn makes it quick and easy to lay.
- **Versatile.** Depending on time and budgets available, Ultrapave can be pointed using traditional methods, loose sand or the latest resin-mix technology.
- **Good looking.** Consistent colouration and high-definition stone textured finishes mean Ultrapave looks great in any environment.
- **Environmentally responsible.** Supplied in pallets made from recycled timber, Ultrapave's reduced sizes and weights can decrease haulage, packaging and storage requirements by up to 50%. A shallow 20mm profile also reduces any physical impact made on the site during preparation.

Size	Weight per slab	Compared with	Pallet quantity	Pallet weight	Available
24x24 (600x600)	16kg	32kg	30	500kg	Now
24x12 (600x300)	8kg	16kg	60	500kg	Now
12x12 (300x300)	4kg	8kg	60	250kg	Now
24x12 (600x300) Edging	9kg	-	-	-	Now
24x18 (600x450)	12kg	24kg	30	380kg	Coming soon
18x18 (450x450)	9kg	18kg	30	300kg	Coming soon
12x18 (450x300)	6kg	12kg	30	190kg	Coming soon

AVAILABLE IN TWO SHADES:

Quarystone

Moorstone

*Whether you're a builder, architect, landscaper or DIY enthusiast, combine these benefits with RLC's famously comprehensive sales support and technical back-up, and you'll see why Ultrapave puts a whole new world of paving at your feet.*

\*Photography is for illustration purposes only and actual colours may vary slightly due to the printing process.

#### Fitting instructions

Ultrapave pavings are designed to be fitted using conventional techniques. If the sub-base has been correctly levelled, it is easy to achieve an effortless patio using less materials than usual.

Mix three parts building sand to one part cement. Place several spots where the slab is to be laid, ensuring the corners and edges are supported and tap the slab level using a rubber mallet until the required level is achieved. It is important to place sufficient spots/dabs under the slab, creating a full bed of mortar for the paving. It is recommended that the pavings are wet prior to fitting to increase adhesion.

There are three alternative options when pointing, or jointing Ultrapave:

- 1) Due to the unique accuracy of the slab, you can simply 'butt' the pavings up leaving a tight joint and brush kiln-dried sand into the joints.
- 2) D1 pointing compound NEW. See leaflet for details.
- 3) Conventional pointing using two parts silver sand to one part cement. Push the mortar into the joints using a pointing iron. You can add dye to the mortar for added appeal.

*\* Coming soon and combining all the benefits of Ultrapave, Smartpave is a 10mm-thick alternative which is perfect for use on indoor applications including kitchens, wet rooms and utility rooms. Smartpave can also provide savings of up to 80% when applied as an easy-to-use overlay in external situations.*
